

EFFECT OF COVID-19 ON SALES FROM 2015-2021

EFFECT OF COVID-19 ON SALES FROM 2015-2021

CHART REPORT

> This chart shows the total number of exports, imports and reimports (i.e returns) in all selected country. This highlights that a great deal of the goods of the all countries are been exported with only few been imported which impies that the nation where mostly depending on thier resources for survival.

> This stacked bar chart shows that china has the highest number of Export and also import from 2015 to 2021 while some others had a very little exports and no imports whatsoever such as the European UnionJapan, and the United Staes.

> This chart shows that more than 259Trillion were spents by all nation on exptrting during the Covid-19 period via "all" means of transportation with majority of all export and imports made on the sea and more of imports by Air when compared to exports

> This simply shows the cummulative amount spent on commodity from 2015 to 2021 with the highest in 2019 and 2020 at 16%.

> China takes the lead in exports with about 20,000 commodities imported followed by US while China still has the lead in imports but US doesn't. Australia, suprisingly, has almost the same count of commodity emported and imported.
