Revenue Generated by product

Money spent on Ads per product

ROA per Product

Firstly, on data quality, there was incomplete data as for medium of advert was not entirely filled for all product. To solve the solution, I will need to ASK the supervisor or manger that gave the data if there were alternatives to use.

Secondly, data type for currency was not expressed, I had to change the data type to currency after converting from USD to EUR.

Lastly, for redundant columns, I deleted them for data validation and clarity.
