Reimports

**INSIGHT:** For the period under review, we observe a substantial amount of exports generally, followed by imports. Reimports were however relatively negligible. As regards the effect of Covid-19 on trade, we observe a gradual but consistent increase in the volum of exports until 2019 when exports began to plunge. This may be attributed to the general distrption in freight transportation (via sea, land and air) making it imposible to export goods. This could also be linked to the inability of people to indulge in productive activities necessary for export products, due to the lockdown. A similar trend is obseved for imports and reimports.
